E. Marban U.S.S.N. 09/187,669 Page 2

But

2. (amended) The method of claim 1, wherein the drug target protein expression is modulated when a candidate drug compound is administered to a host cell, in which the drug target protein has been introduced, thereby identifying a target of the drug candidate compound.

8²

7. (amended) A method for detecting a potential drug target protein, comprising: modulating, by somatic gene transfer, expression of the drug target protein in host cells; administering a candidate drug compound to the host cells; and, determining the expression of the drug target protein expressed in the host cells.

14. (amended) The method of claim 7, wherein the drug target protein forms a complex with at least one other protein.

29. (amended) A method of mimicking one or more effects of a drug candidate compound in an identified somatic cell, tissue or organ of interest, the method comprising:

modulating, by somatic gene transfer, expression of a desired drug target protein in cells; and,

By

and,

administering to the cells a candidate drug compound; wherein, the candidate drug compound modulates the expression of the drug target protein;

analyzing the expression of the drug target protein as a result of administering the candidate drug compound; and,

thereby, predicting the effect of the drug candidate compound.

95

31. (amended) The method of claim 30, further comprising:

culturing in medium a population of somatic cells, a tissue or an organ capable of expressing a recombinant nucleic acid segment encoding a drug target protein; and,
